Matthew J. Wenger and Dr. Lee L. Schroeder announced yesterday the launch of a new world-wide computer-based testing company, called Iso-Quality Testing, Inc., based in Dunedin, Florida. In the testing industry, Computer-Based Testing (CBT) refers to the crucial process for administering high-stakes examinations, such as licensure and certification tests, in proctored and secure testing centers via desk-top computers. CBT eliminates the need for traditional paper test booklets and scan sheets, thus mitigating the potential security problems associated with transporting and handling them.

“The mission of Iso-Quality Testing, Inc. is to provide secure, user-friendly, high quality, reasonably-priced computerized examination delivery services to credentialing bodies, and the candidates which they examine, at available locations around the world” said Dr. Schroeder. “We are fully committed to providing comprehensive and cost-effective computer-based testing solutions to credentialing bodies, and competent consultation services on matters pertaining to the administration of examinations via computer. The term ‘Iso-’ refers to the inputs on an optimal solution curve and reflects our core philosophy of providing optimal and high-quality solutions to our clients.” Wenger added.

In the area of test administration services, candidates who are required to take an examination, deserve to be provided with:

- a straightforward and timely administrative process for registering, paying and scheduling the examination;
- secure, reliable, and standardized testing conditions; and
- pleasant and knowledgeable customer service from the interaction with any Iso-Quality representative. “That is what Iso-Quality Testing is all about” concluded Wenger.

The principle stockholders of Iso-Quality Testing, Inc have named Wenger as President of the new firm. Schroeder, President of Schroeder Measurement Technologies, Inc, (SMT) based in Dunedin, FL, has worked in the testing business for over 30 years. Wenger, former Vice President of SMT since 1993, takes up the new post at Iso-Quality Testing as of today. According to both Schroeder and Wenger, they expect the two firms, SMT and Iso-Quality Testing, to have an unusually close working relationship, including some shared resources, since the offerings of the two firms complement one another in meeting the needs of certification and licensure clients.
