

# Solutions Through Innovation:

## SMT Computer-Based Testing

### Test Center Network

Schroeder Measurement Technologies, Inc. (SMT) offers computer-based testing (CBT) through an extensive network of authorized, secure testing centers at partner locations through North America. Using professional computer facilities at CompUSA and other convenient, reliable locations, SMT's network offers a professional, proctored setting. All sites in the SMT Test Center Network must meet rigorous environmental, hardware, and connectivity standards, and all proctors are trained and certified by SMT. SMT's network continues to be expanded, so to browse our current locations, go to [www.smttest.com](http://www.smttest.com) and click "Find a testing center" in the "Quick Links" box in the upper right corner of the site.

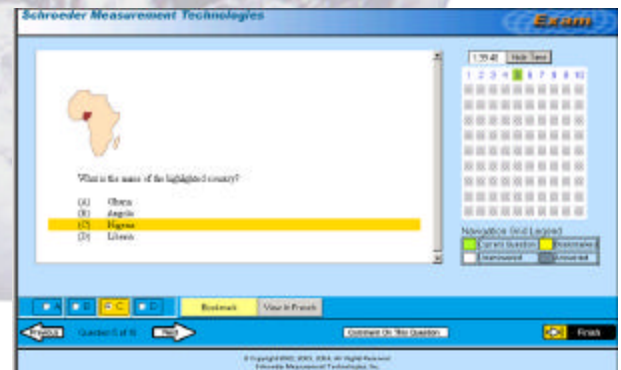

### Client-Specific and Temporary Test Centers

Because SMT delivers examinations using a desktop link to a hidden URL in a custom browser application written specifically for testing, SMT can deliver examinations to any Internet-connected computer in the world. Major client business partners, for example, can be authorized as specialized test centers by meeting minimum standards for hardware and connectivity and receiving proctor training and certification through our online proctor-authorization service.

### Innovative Test Delivery

The SMT test delivery system makes it easy for candidates, even those unfamiliar with computers, to successfully take examinations. The custom browser, specifically written for testing, features standard navigation buttons, such as "Next," "Previous," and "Mark for Review," as well as several special features that make it the most powerful testing engine in the industry:

- ≈ Candidates can switch to a second language with a simple toggle button.
- ≈ Candidates can offer comments about test items, giving editors and subject matter experts useful information.
- ≈ The unique on-screen Navigation Grid allows candidates to easily determine progress and navigate through the test. Candidates can select answers using the mouse or keyboard, and selected responses are clearly highlighted.

**Call us today to take advantage of the most flexible CBT available!**
